

MANAGEMENT SUMMARY REPORT – INDIAKART

To: CEO, IndiaKart

From: Anisha Azmi, Data Analyst

Subject: Business Performance Analysis and Recommendations

Date: August 22, 2026

This report summarizes the key findings from the analysis of Indiakart's sales and customer data. The analysis focuses on overall business performance, revenue, orders, customer behavior, product categories and operational performance. The objective is to identify the company's strengths, risks and opportunities for future growth.

1. EXECUTIVE SUMMARY

IndiaKart generated total revenue of ₹3.15 bn from allover orders. Electronics category contributed the highest share of revenue ie ₹1.6 bn , however toys & baby, beuty & health, grocery and books category shows weaker performance and requires attention. The cancellation rate is slightly high ie 11.99% than the target rate ie <10%. The return rate is slightly high ie 12.10% than the target rate ie <8%. Also the payment failure rate is slightly high ie 3.5% than the target rate ie <2%. Customer analysis also shows premium segment customers is very low ie 15% than the regular segment customers ie 40.3%. Based on these analysis, Indiakart should focus on improving payment method, investing in weaker performance categories and bringing new ideas to upgrade customers into premium segment.

2. Top 3 Findings

1. Products of Electronics category generates 1.6 bn , contributing 50% of the total revenue. All the top 10 products belongs to Zebronics brand. And remaining 50% of the revenue generated by in combination of all others categories. This indicates that Electronics category with Zebronics brand plays very important role in revenue.

2. Customers with age group 46+ are 41.8% which indicates that they contribute more than other age groups. The regular segment customers are 40.3% while premium segment customers are 15%. This indicates that the company must improve their criteria to increase the premium segment.

3. Return rate is 12.10% which is slightly high than the target. The most number of returns is due to size issue i.e. 1.2k. UPI payment method contributes 1.1 bn in total. This indicates that IndiaKart must resolve the reason for returning of products and in every order UPI must be available for payments.

3. Risk Identified

IndiaKart should concern for the following:

Risk	Evidence
1. High cancellation rate	11.99% orders cancelled.
2. Less revenue than previous year	0.76 bn in 2025 and 1.56 bn in 2024.
3. Weak category	Toys and baby, beauty and health, Grocery and books together contribute 0.1 bn.
4. High return rate	12.10% orders return.
5. High Payment failure rate	3.50% payment failure rate.

4. Opportunities

1. Electronics category is generating a large percentage of revenue, IndiaKart should expand its product range in that category. For weaker category promotions, pricing, or marketing should be improved to increase their sell.

2. Regular customers are more than premium one, so IndiaKart could create personalized offers or loyalty programs to maintain their customers.

3. Return rate can be managed by analyzing the reason for returning, such as damaged in transit, wrong product delivered, defective product.
4. Most of the orders are made by App and payment are done by UPI, so IndiaKart should try to enhance the use of mobile app and payment methods.

5. Recommendation

1. In 2025 there are decrement in order month by month, overall revenue is less than the previous month. IndiaKart should introduce targeted offers or loyalty programs for customers who make purchase in 1st month but do not in other months.
2. IndiaKart should analyze cancellation reasons and try to maintain its product quality, transit quality and speed, on time delivery to meet customer expectations.
3. Payment failure rate can be maintained if the app and upi will work smoothly and efficiently. IndiaKart could update their app and add some discounts for using upi at the time of payment.

6. Conclusion

Overall, the analysis indicates that IndiaKart has strong growth potential, but improving category performance and focusing on regular customers will be important for sustainable growth. The recommended actions should be monitored through key metrics such as revenue, cancellation rate, return rate and customer insight.
